Highest hot water comfort: more convenient and efficient

About Vaillant 關於威能

Comfortable technology in the field of electric hot water supply

Innovation is Vaillant. Vaillant is leader in ideas for heating and synonymous of trend-setting system technology in the field of residential heating, domestic hot water and home conveniences. Today, with the know-how and competence acquired in more than 140 years in innovation for heating, Vaillant offers a vast range of electric hot water appliances fully capable of matching any domestic hot water demands and modern conveniences of our customers.

Fast, proper and economical: multi-point hot water supply

In many cases, multi-point electric hot water supply is an attracting and interesting alternative solution. Water is being heated at exactly the time and the place where it is needed and in exactly the quantity which is needed. Long pipe work is not only a synonym of high heat loss but also unnecessary consumption of precious potable water. Therefore, positioning the water heater close to the tapping points will drastically minimize energy losses and cost of pipe works.

Top quality and design 優質典雅設計

THE RIGHT DEVICE FOR EVERY REQUIREMENT

The new product series electronicVED always offers the right solution for a wide variety of requirements: from a simple basic model to an exclusive device with many additional functions. All devices ensure the best hot water comfort and high energy efficiency.

FAST AND READY TO USE EVERYWHERE

Whether bathroom or kitchen: Our electronic instantaneous water heaters are suitable for many application areas. They are individually applicable and can supply one or more taps at the same time. In addition, they can be quickly and easily installed in a new built home or just simply replacement.

ECONOMICAL, FAST AND COMFORTABLE EXPERIENCE

Especially in the bathroom and kitchen, a decentralized hot water supply is the optimal solution because the water is heated as needed: exactly in the right place, at exactly the right time, in just the right amount. Electricity is consumed when warm water is needed. In addition, there are no storage or circulation heat losses - and the short lines reduce heat losses to a minimum. This not only saves energy but also prevents unnecessary consumption of water

CONTINUOUS EFFICIENCY: THE ELECTRONIC VED SERIES

ElectronicVED instantaneous water heaters can do even more: compared with hydraulic instantaneous water heaters, thanks to a pre-set desired temperature, you can save up to 30% on water and energy. Mixing cold water is no longer necessary.
